

# Password Generator

Effective way to use Password Generator in 4 simple steps:

Read some tips on how to create secure passwords.

**2** Check the options you want for your new password.

Your password will be here.

**1** Enter the number of characters you would like in your new password (minimum 8 and maximum 500)

**3** Generate your password!

**4** Copy or generate another password!

The screenshot shows a web application titled "Password Generator" with a menu bar containing "File" and "Help". Below the title bar is a "Password Tips" button. The main content area is titled "Your Password Generator Options:" and contains a text input field for the number of characters (set to 20), three checked checkboxes for "Password has letters?", "Password has numbers?", and "Password has symbols?", and a "Generate Password!" button. Below this is a section titled "Your new password" with a text input field and a "Generate Another Password!" button. At the bottom right is a "Copy to Clipboard" button. Red arrows and numbers 1-4 point to specific elements: 1 points to the character count input, 2 points to the checkboxes, 3 points to the "Generate Password!" button, and 4 points to the "Generate Another Password!" and "Copy to Clipboard" buttons. A text label "Your password will be here." points to the password output field.
